

SafeCash Counter Deposit Smart

Make your store a safer place to work

GUNNEBO®
For a safer world

Smart deposit and secure cash processing

Fear of robbery at work is a very common feeling for staff members in retail environments. Keeping cash locked away and out of sight greatly reduces the temptation for robbery and offers staff greater peace of mind.

But for many small retail businesses, cash-handling systems can be costly and too complicated for their specific cash management needs. They need a simple, efficient and convenient solution that reduces the risk of robbery, requires less investment and ensures the exact amount of cash is accounted for at every till and at every store location.

The SafeCash Counter Deposit Smart is perfectly designed for small retail outlets. Adapted to under counter installation, it provides an ergonomic front-line cash-handling solution to manage bank note depositing and processing efficiently and securely.

Notes are automatically registered, counted and deposited minimizing the risks of robbery, burglary and internal theft. The SafeCash Counter Deposit Smart captures note validation and note value data in real time at the point of sale. Cash deposits are untouched until they reach cash processors, ensuring 100% of your money finds its way to your bank account.

Specific cash-handling challenges:

Security risks

Small amounts attract thieves as much as large sums. For small retailers, robbery costs due to lost sales, damages and extra personnel.

Lost time

Manual notes counting and verification take time and resources away from revenue-generating activities such as customer service and sales.

Shrinkage

Administrative errors due to manual counting can affect overall profitability.

An intelligent and secure cash-handling solution

Deposit and secure cash

The SafeCash Counter Deposit Smart is a single note deposit solution using a cassette-based intelligent system. Take advantage of the unit's plug-&-play system that is always ready to receive cash and enables operation after quick installation. Notes presented are accepted, instantly counted and stored in a S1 safe.

Once a transaction is started, multiple single notes are automatically registered, counted, deposited and stored in a cassette for quick and easy collection. Five seconds after the last note has been deposited, the transaction is closed. For convenient CIT pick-up, the notes are sent straight into a cassette.

No more manual counting or verification. You can save the obvious costs associated to robbery while your staff is benefiting from a safer work environment in which they can spend less time on cash administration and more time on customer service.

Track cash flow in real-time with CashControl

Continuously monitor real-time cash levels using Gunnebo's CashControl web-based monitoring system to ensure transaction transparency, reports or data export.

This can either optionally be hosted by Gunnebo or by the retailer, who may choose to run the programme locally or centrally.

Optimise pickups and maintenance

Choose to grant access to the system to CIT partners for optimized route planning and pick-up times. You can also ensure ongoing updates and maintenance thanks to Gunnebo service, which is available 24/7 and guarantees a response time that can be set according to your business requirements.

Mobile web-based supervision solution

A mobile version of the CashControl application enables you to easily manage your cash in a real-time mobile environment. No need to control the operations from the back office area, the cash content status, operational overview, transaction or collection reports can be operated directly at store from a smart phone. This tool also offers user identification so that people are registered when making a deposit. And the cash handling issues can be solved efficiently and quickly, allowing streamlined processes.

Benefits

1. **Enhanced security and peace of mind** thanks to the closed-loop cash management system
2. **Faster return on investment**
3. **Unrivalled protection against fraudulent notes**
4. **Increased efficiency and higher acceptance rates** due to advanced recognition algorithms that confirm notes as genuine
5. **Time and cost savings** as a result of a simplified cash-handling process, and reduced maintenance and down time
6. **Less back office administration** due to easy-to-use configuration and simple installation
7. **Complete transaction transparency** for zero cash discrepancies
8. **Real-time, web-based monitoring** of cash levels via CashControl software
9. **Ability to approve** CIT companies for cash collections
10. **Overnight closure**

Technical data

Steel housing	3mm casing – 8mm steel door
Operating system	Windows 7 embedded
Feeder capacity	single note deposit
Deposit speed	up to 20 notes/minute
Cassette capacity	500 notes (up to 1,200 optional)
Communication	TCP/IP
Dimensions (WxDxH)	Electronic Lock: 180x450x470mm Lock with key: 180x410x470mm
Weight	32kg
Power supply	230V – 50Hz
Power consumption	15W (idle), 30W (normal)
Operating condition	T 5–45°C, H 20–80%
